1 Introduction

This description lists all the error messages on the configurable control system PNOZmulti.

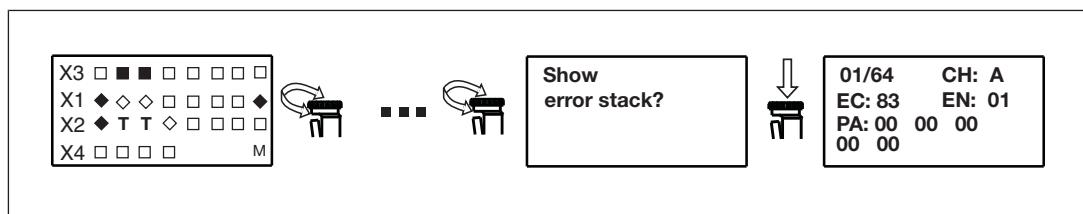

This description also explains how to read the error stack on the display of the base units PNOZmulti Mini and PNOZmulti 2 and how to evaluate the error parameters.

1.1 Displaying the error message on the display

The error stack can be read from the PNOZmulti Configurator or shown on the LC display.

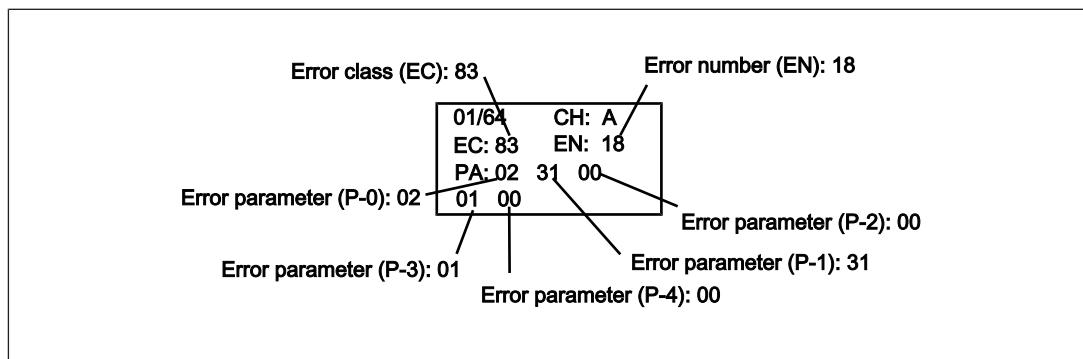

Procedure for displaying the error stack on the LC display:

Use the rotary knob on the base unit to display the error stack.

For details of how to read the error stack using the PNOZmulti Configurator, please refer to the online help for the PNOZmulti Configurator.

On the display:

- ▶ Line 1:
Sequential number of an error stack entry. A new error stack entry is stored in first place.
- ▶ Line 2:
EC: Error class
EN: Error number
- ▶ Line 3 and 4:
PA: Five error parameters (error parameters P-0 ... P-4)

INFORMATION

It depends on the error whether or not error parameters are displayed. The way in which the error parameters should be interpreted also depends on the error. The error parameters for each error are stated in the chapter entitled **Error messages**. The error parameters can be evaluated using the tables in the chapter entitled **Tables for evaluating the error parameters** (see also the section entitled **Evaluate error parameters**, in this chapter).

1.2

Evaluate error message

To evaluate the data on the display, proceed as follows:

- ▶ Search under "Error messages" for the error class (EC)
- ▶ Search the table for the required error number (EN).

The error message and, if applicable, the error parameters and remedy are displayed in the table.

1.2.1

Evaluate error parameters

There are error messages and remedies that contain one or more error parameters (P-0 ... P-4).

Any position within the error message that contains an error parameter is identified with a number, e.g. <1>, <2>....

For each error parameter, the content of the respective error parameter and the way in which it is to be interpreted (as I/O no., module no. ...) is displayed under the error message under **Text Parameter**.

The data can be read via the number shown on the display (P0 ... P4), with the help of the tables in Chapter 3.

Error parameters can have the following content:

▶ Module no.

The error parameter contains the number of a module. The module number can be used to read the corresponding base unit or expansion module in the table [Module I](#) [267] or [Module II](#) [267]

Example:

- On the display
(P-1) = 01
- Text parameter under the error message:
1: Module no. <P-0> (see table "Module I")
-> "1st expansion module to the right of the base unit"

▶ Module no. decentr.

The error parameter contains the number of a decentralised module. The module number can be used to read the corresponding decentralised module in the table [Decentralised modules](#) [268].

Example:

- On the display
(P-2) = 01
- Text parameter under the error message:
1: Module no. decentr <P-2> (see table "Decentralised modules")
-> "2nd decentralised module on the 1st link module to the left of the base unit"

► I/O no.

The error parameter contains the number of an input or output. The I/O number can be used to read the corresponding input or output in the table "Inputs and outputs".

Example:

- On the display
(P-2) = 01
- Text parameter under the error message:
1: I/O no. <P-2> (see table "Inputs and outputs")
-> " Input I1 of base unit"

► Absolute value, decimal or hexadecimal

The error parameter contains an absolute value (. The error parameter can be replaced directly by the number on the display.

Example:

- On the display
(P-2) = 01
- Text parameter under the error message:
1: <P-2> absolute value, decimal
-> "1"

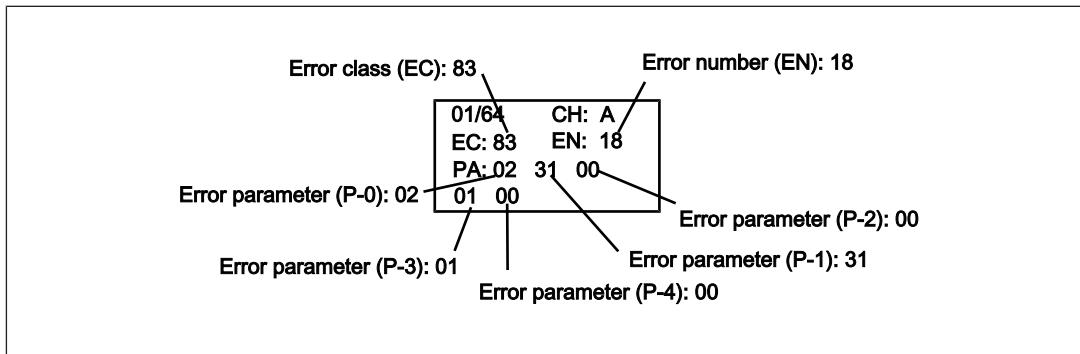

► Element in the user program

The error parameter contains the number of an element in the user program. The element number can be read in the user program in the PNOZmulti Configurator.

- On the display
(P-2) = 01
- Text parameter under the error message:
1: Element <P-2> in the user program
-> 1st element in the user program

1.2.2 Example

On the display:

Look for the following in the chapter entitled "Error messages":

- ▶ Error class (EC) 83
- ▶ Error number (EN) 18

Error no. (EN)	Error message	Remedy
18	<p>Error caused by the feedback loop for the actuator on output <1> (terminal: O<2>) Location: <4></p> <p>Text parameter</p> <p>1: I/O no. <P-1> (see table "Inputs and outputs") 2: <P-3> absolute value, decimal 3: Element <P-0> in the user program 4: Module no. <P-2> (see table "Module I")</p>	<ul style="list-style-type: none"> -Ensure that the actuator on output <1> (terminal: O<2>) is operating correctly. -Ensure that the feedback loop on element <3> is configured correctly. -Ensure that the feedback loop is wired correctly. ...

Evaluate the error parameters:

- ▶ **1: I/O no. <P-1> (see table "Inputs and outputs")**
No. on display for P-1: 31
Evaluation: I/O no. 31 in table "Inputs and outputs"
– <1>: Output O1 of base unit
- ▶ **2: <P-3> absolute value, decimal**
No. on display for P-3: 01:
Content: Absolute value, decimal
Evaluation: Value is adopted directly
– <2>: 1
- ▶ **3: Element <P-0> in the user program**
No. on display for P-0: 02
Evaluation: Must be evaluated in the assignment list in the PNOZmulti Configurator
– <3>: Element 2 in the user program

► **4: Module no. <P-2> (see table "Module I")**

No. on display: 00:

Content: Module number

Evaluation: Module no. 00 in table "Module I"

– <4>: "Base unit"

Evaluated error message:

Error no. (EN)	Error message	Remedy
18	Error caused by the feedback loop for the actuator on output Output O1 of base unit< (terminal: O1 Location: Base unit	-Ensure that the actuator on output Output O1 (terminal: O1) is operating correctly. -Ensure that the feedback loop on element Element 2 in the user program is configured correctly. -Ensure that the feedback loop is wired correctly. ...

3 Table for evaluating the error parameters

3.1 Module I

Module no.	Module
00	Base unit
01	1st expansion module to the right of the base unit
02	2nd expansion module to the right of the base unit
03	3rd expansion module to the right of the base unit
04	4th expansion module to the right of the base unit
05	5th expansion module to the right of the base unit
06	6th expansion module to the right of the base unit
07	7th expansion module to the right of the base unit
08	8th expansion module to the right of the base unit
09	Fieldbus module
0A	1st expansion module to the left of the base unit
0B	2nd expansion module to the left of the base unit
0C	3rd expansion module to the left of the base unit
0D	4th expansion module to the left of the base unit
0E	5th expansion module to the left of the base unit
0F	6th expansion module to the left of the base unit
F1	Integrated interface to connect 2 base units

3.2 Module II

Module no.	Module
01	1st expansion module to the left of the base unit
02	2nd expansion module to the left of the base unit
03	3rd expansion module to the left of the base unit
04	4th expansion module to the left of the base unit
05	5th expansion module to the left of the base unit
06	6th expansion module to the left of the base unit
20	1st expansion module to the right of the base unit
21	2nd expansion module to the right of the base unit
22	3rd expansion module to the right of the base unit
23	4th expansion module to the right of the base unit
24	5th expansion module to the right of the base unit
25	6th expansion module to the right of the base unit
26	7th expansion module to the right of the base unit

Module no.	Module
27	8th expansion module to the right of the base unit
E0	Fieldbus module
F0	Base unit
F1	Integrated interface to connect 2 base units
F2	Safe Ethernet connection

3.3 Decentralised modules

Module no.	Module
00	1st decentralised module on the 1st link module to the left of the base unit
01	2nd decentralised module on the 1st link module to the left of the base unit
02	3rd decentralised module on the 1st link module to the left of the base unit
03	4th decentralised module on the 1st link module to the left of the base unit
10	1st decentralised module on the 2nd link module to the left of the base unit
11	2nd decentralised module on the 2nd link module to the left of the base unit
12	3rd decentralised module on the 2nd link module to the left of the base unit
13	4th decentralised module on the 2nd link module to the left of the base unit
20	1st decentralised module on the 3rd link module to the left of the base unit
21	2nd decentralised module on the 3rd link module to the left of the base unit
22	3rd decentralised module on the 3rd link module to the left of the base unit
23	4th decentralised module on the 3rd link module to the left of the base unit
30	1st decentralised module on the 4th link module to the left of the base unit
31	2nd decentralised module on the 4th link module to the left of the base unit
32	3rd decentralised module on the 4th link module to the left of the base unit
33	4th decentralised module on the 4th link module to the left of the base unit

3.4 Inputs and outputs

I/O no.	Input/output
00	Input I0 of base unit
01	Input I1 of base unit
02	Input I2 of base unit
03	Input I3 of base unit
04	Input I4 of base unit
05	Input I5 of base unit
06	Input I6 of base unit
07	Input I7 of base unit
...	...

I/O no.	Input/output
23	Input I19 of base unit
30	Output O0 of base unit
31	Output O1 of base unit
32	Output O2 of base unit
33	Output O3 of base unit
40	Output O4 of base unit
41	Output O5 of base unit
50	Input/output I/O 0 of the 1st expansion module to the right of the base unit
51	Input/output I/O 1 of the 1st expansion module to the right of the base unit
52	Input/output I/O 2 of the 1st expansion module to the right of the base unit
...	...
60	Input/output I/O 0 of the 2nd expansion module to the right of the base unit
61	Input/output I/O 1 of the 2nd expansion module to the right of the base unit
...	...
71	Input/output I/O 0 of the 3rd expansion module to the right of the base unit
72	Input/output I/O 1 of the 3rd expansion module to the right of the base unit
...	...

Pilz develops environmentally-friendly products using ecological materials and energy-saving technologies. Offices and production facilities are ecologically designed, environmentally-aware and energy-saving. So Pilz offers sustainability, plus the security of using energy-efficient products and environmentally-friendly solutions.

Energy Saving by Pilz

CMSE™, InduracNET p™, PAS4000™, PAScal™, PASconfig™, Pilz™, PIT™, PLID™, PMCEpro™, PMCtendo™, PMSN™, PN0Z™, Primo™, PSEN™, PVIS™, SafetyEye™, SafetyNET p™, the spirit of safety™ are registered and protected trademarks of Pilz GmbH & Co.
